

# Database Integration Tool

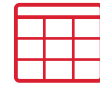

The ProPricer Database Integration tool transfers cost and pricing data between ProPricer and MSSQL or Oracle data centers. By configuring data mapping with an intuitive Database Integration Manager, automatically run transfers on a schedule that fits any requirement.

Scheduling

## Benefits

- **Flexible**

This tool allows for all cost and pricing information to be pushed or pulled directly to other databases in a data center. All transfer of data can happen at the time that works best for the company's schedule. Automation can be programmed for an even easier process transfer.

- **Fast**

Eliminate the labor-intensive data transfer process procedure that can take hours. With a few button clicks, load any cost data into ProPricer or export data from ProPricer into downstream applications.
